Manufacturers Technical Specification

The manufacturer's Technical Specification for protective clothing was based on EN ISO 14116:2015 "*Protective clothing – Protection against flame – Limited flame spread materials, material assemblies and clothing*". The suitability of this Technical Specification was checked with respect to the Essential Health and Safety Requirements of EU Regulation 2016/425, and was found to address the requirements for this end use.

Limitations of Use

- Usage, maintenance and storage as per manufacturer's instructions.
- The User Information has been assessed in the English language only. It is the responsibility of the manufacturer to ensure the content and accuracy of the User Information presented in other languages.
- Single layer Garments conforming to Index 1 of EN ISO 14116:2015 should not be worn next to the skin, and should be worn over garments meeting Index 2 or 3 of the standard, however it is necessary to connect the garment to earth in order to conform to EN 1149-5:2008. This is usually achieved by skin contact with an earthed wearer.

The manufacturer has stated that Pyrolon garments are not intended to protect against flame but rather to wear over other flame protective garments to provide liquid / dust protection and improve thermal protection.

If the garment is required to provide flame protection and also to eliminate the risk of electrostatic discharges from the garment, the garment must be earthed via other means.

Observations

- Not applicable.
